

OPW Fuel Management Systems Advanced Set-up and Diagnostic Software

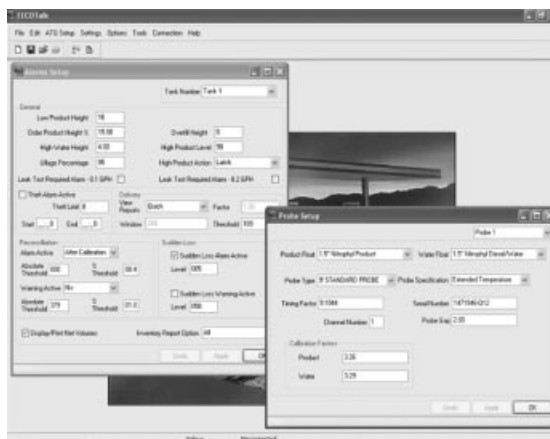

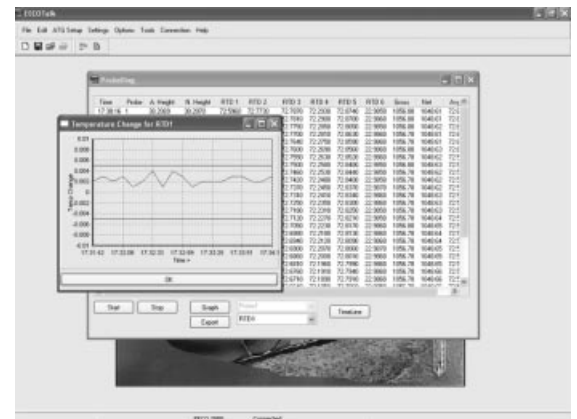

EECOTalk™ is a Windows®-based application for setting up EECO tank gauge systems quickly and easily. System set-up is automated, minimizing the time spent at the site during start-ups and service. EECOTalk also improves data collection efficiency at your sites, eliminating many possible human errors.

EECOTalk's diagnostic features alert you to system problems from your office PC. Save time and money by knowing the system problem before making that costly service trip to the site.

With EECOTalk, you'll also know if your system is providing the accuracy you need for efficiently managing your fuel.

EECOTalk's user interface is intuitive and easy to use, requiring very little training. Its simplicity helps guarantee that all your tank monitors are programmed with the right information, improving overall site control. Update existing EECO site profiles, or create new profiles, for easy uploading to your EECO 1500, 2000 or Galaxy tank gauge. All aspects of your site – from setup to diagnosis – are only a mouse click away.
